

DOUGLAS—FIR

SCIENTIFIC NAME: *Pseudotsuga menziesii*

DISTRIBUTION AND AVAILABILITY

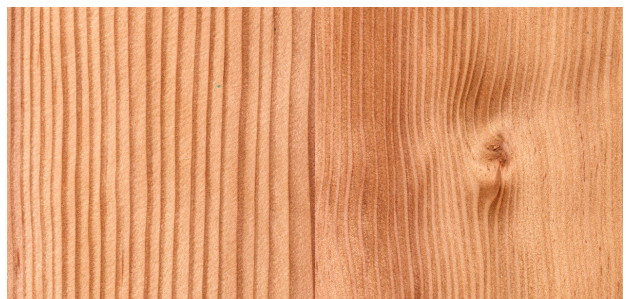

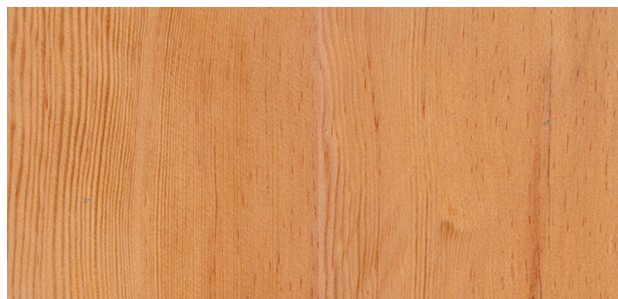

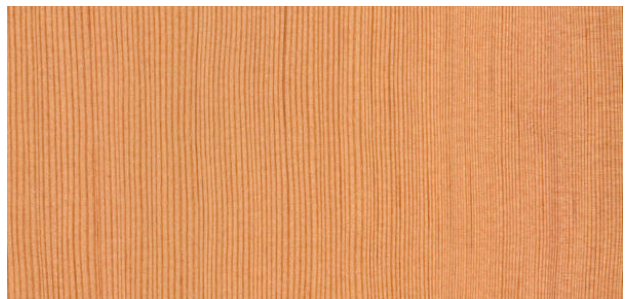

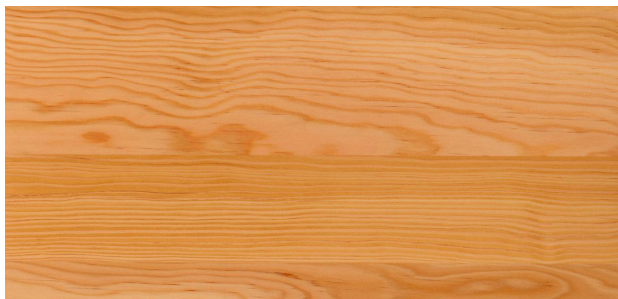

- Western North America
- Readily Available

COLOR:

Range Variation

Douglas–Fir can vary in color based upon age and location of tree. Usually a light brown color with a hint of red and/or yellow, with darker growth rings. In quartersawn pieces, the grain is typically straight and plain. In flatsawn pieces, (typically seen in rotary–sliced veneers), the wood can exhibit wild grain patterns.

DISCLAIMER

A single sample may not accurately represent the full range of natural variations to be expected. Due to the inherent properties and characteristics of wood, these samples should be viewed as an approximation of what can be obtained. Some wood species have more natural variance in appearance than others. We have made every effort to make colors as accurate as possible. Colors on screen may vary depending on your screen setting and resolution.

DOUGLAS FIR INFORMATION

| | | |
|---|-------------------------|---|
| AVERAGE DRIED WEIGHT | | 32 lbs/ft ³ (510 kg/m ³) |
|  | GRAIN TEXTURE | The wood is generally straight-grained, although there is sometimes a tendency for wavy or spiral grain to be present |
|  | PRICING AVAILABILITY | Low to Moderate. Vertical Grain available at a premium. <i>Readily Available</i> |
|  | COVERED EXTERIOR RATING | Poor Good Excellent |
|  | PHOTOSENSITIVITY | High Moderate Low |
|  | CONSERVATION STATUS | LC - Least Concern (IUCN 3.1) |
|  | VENEER OPTIONS | Vertical Grain |
